Top Reasons to Consider VMware and IGEL Together

1 Enhanced Security

The combination of the IGEL Preventative Security Model (PSM) and the security benefits of virtualized desktops and applications deliver a highly robust desktop architecture

2 Simplified Management

All IGEL endpoints can be managed centrally from the IGEL Universal Management Suite, regardless of physical location.

3 Cost Savings

Utilizing IGEL OS at the endpoint delivers several cost-saving benefits including:

- reduced endpoint hardware costs
- reduced endpoint software costs
- reduced endpoint management
- extended endpoint device refresh lifecycles

4 Flexibility and Scalability

IGEL OS grows with your journey through VDI, DaaS and SaaS. IGEL fully supports on-premises and multi-cloud virtual desktop and application deployments.

5 VMware Workspace ONE and Horizon 8 Integration

IGEL has multiple integrations with VMware Horizon and Workspace ONE to simplify management of your virtualized desktop and application infrastructure and ensure the best possible user experience

6 Partner Ecosystem

The VMware Technical Alliance Program (TAP) with over 75,000 partners worldwide and the IGEL Ready Program with over 130 integrations of the latest technologies help ensure easy integration and productive work at the highest levels.

“ VMware views IGEL as a key ecosystem partner in delivering secure, managed digital workspaces to end-users in the current hybrid access world. As organizations move to a more widely distributed workforce using a broad range of endpoint devices, IGEL OS and VMware Horizon in combination form an excellent solution as end user computing continues to evolve. Our longstanding relationship with IGEL promises to deliver continued strong collaboration and integration as it has during the past two decades. ”
